Evaluation Criteria for Assignments 1 and 2

General

- Follow the correct project structure.
- Use only HTML for structure and CSS for styling (no additional libraries).
- Use consistent language throughout the code base (English).
- Annotate the source code with clear comments.
- Maintain consistent naming conventions in the code base, such as camelCase or kebab-case.
- Deploy the project on a platform such as Netlify, Vercel, or GitHub Pages, and ensure the deployed version is fully accessible and functional.

HTML

- Utilize proper semantic HTML tags.
- Ensure consistent code indentation.
- Include descriptive alt attributes for images.
- Use correct and accessible form elements including proper labels.

CSS

- Ensure the page has a clear and well-structured layout. Use flexbox and grid where appropriate to organize and align page elements.
- Use clear class names that follow the BEM convention.
- Use appropriate units for containers, fonts, and spacing.
- Follow design principles such as color harmony, contrast, and hierarchy.
- Include custom fonts using `@font-face` or use an external font service such as Google Fonts.
- Utilize CSS variables to manage fonts, colors, and sizes.
- Write modular CSS styles.
- Import CSS files in a logical order.
- Ensure pages are responsive across desktop, mobile, and tablet devices.
- Write media queries in the correct order.

Version Control System

- Manage the project using Git.
- Maintain a remote repository on GitHub, documenting progress through commits that match the project scope.
- Write clear and concise commit messages.

Failure Criteria

- Failing to deliver the assignment.
- Delivering an empty folder or a folder with unrelated files.
- Not using any CSS for styling the content.
- Using a styling library instead of pure CSS for styling.
- Copying code from external sources without proper references or acknowledgment.
