Full-Stack Development

Semester 1

Individual Assignment 1

Topic

HTML and CSS Fundamentals

Description

The purpose of this assignment is to gain practical experience in understanding and implementing fundamental HTML and CSS concepts. Through this assignment, students will learn how to structure a webpage using HTML and style it effectively with CSS.

For this assignment you are expected to build a simple website. Your website must consist of a minimum of two pages:

- A page that introduces a product in detail.
- A page that contains a form to order the product.

Regarding the product selection, you are free to choose any item from any category. Some suggestions include a specific mobile phone, laptop, TV, home appliance, bicycle, cosmetics, or any other product that interests you.

Make sure:

- The product details page contains images of the product (minimum one image).
- HTML lists are used to present the product's details.
- Users can navigate back and forth between the pages using links.
- The order form includes a minimum of four types of input elements in combination with other form elements.

- The footer must include a disclaimer stating that this is a student project created for educational purposes and is not an official or affiliated website.

Feel free to take inspiration from online stores and e-commerce websites but ensure that your work remains original and follows the assignment requirements.

Grading Information

This assignment is pass or fail.

Criteria

Refer to the `assignment_1_criteria.pdf` file included in the `assignment_1 folder`.

Delivery Format

```
assignment_1/
├── index.html
├── css/
│   └── styles.css
├── assets/
│   └── (images, fonts, etc.)
└── readme.md
```

The `readme.md` should include a brief description of your project, a link to the GitHub repository, a link to the deployment, and a note stating that this is a student project created for educational purposes and is not an official or affiliated website.
